Meeting records  Transcript

Summary

The team aligned on the Amsterdam hackathon structure and confirmed leadership while planning future demo presentations.

Amsterdam Hackathon Logistics

The group planned a structured hackathon for the upcoming conference with

dedicated enablement sessions during lunch. Attendees will receive pre-built technical modules to ensure productivity within the limited time.

Demo Days Initiative

Members decided to implement recurring Demo Days to showcase agent projects. The team established a coordination process for sign-ups via the team messaging channel.

Hackathon Ownership Consensus

The group designated specific leadership roles for the hackathon event. This decision ensures clear project oversight and effective backlog management moving forward.

Decisions

Aligned

- **Hackathon structural and enablement strategy** The hackathon is structured to include lunchtime enablement sessions, with pre-built modules provided to ensure participants can complete agent builds within the allotted timeframe.
- **Implementation of recurring agent demo days** The group will implement recurring agent demo days during meetings, starting in the next session, to provide a forum for showcasing member projects.

We've **updated the Decisions section** using your feedback.

Let us know what you think: [Helpful](#) or [Not Helpful](#)

Next steps

- ☐ [The group] Share Prerequisites: Send technical requirements and preparation steps to potential hackathon participants.

- ☐ [The group] Define Requirements: Establish technical prerequisites for participants to ensure successful agent building.
- ☐ [Holly Hall] Propose Timeline: Create a suggested event schedule and communicate it back to the working group.
- ☐ [Rebecca Veldon] Manage Backlog: Coordinate with George and Tim to create a product backlog of tasks for the hackathon.
- ☐ [The group] Schedule Demonstrations: Allocate 10 to 15 minutes during each future session to host individual agent showcases.
- ☐ [Doug Wessel] Present Agent: Prepare and conduct the first agent demo at the next session.
- ☐ [The group] Request Slots: Post requests to the Slack channel for individuals interested in showcasing their agents.
- ☐ [The group] Review Documentation: Evaluate the provided documentation buckets for feedback and potential transformation into articles.
- ☐ [Rebecca Veldon] Update Records: Upload all meeting transcripts and notes to the GitHub repository.

Details

- **Meeting Opening and Agenda:** Holly Hall, Rebecca Veldon, Devon Hillard, and George Fitzgibbons began the meeting with introductions and a status update on the Agent Ready email. The group established an agenda to discuss the upcoming hackathon and the status of ongoing blog articles, noting that George Fitzgibbons had to depart early ([00:00:03](#)).
- **MACX Amsterdam Hackathon Logistics:** Holly Hall provided an overview of the event, scheduled for September 28th at the Felix Meritus venue in Amsterdam ([00:03:17](#)). Holly Hall explained that Monday, September 28th, would focus on setup and member strategy, offering potential space for a hackathon, while Tuesday would be the full conference with 400 attendees and limited space, potentially allowing for a room accommodating approximately 25 people ([00:04:42](#)). George Fitzgibbons suggested that Tuesday would likely generate more engagement, despite the space constraints compared to Monday ([00:07:36](#)).

- Integration of Working Groups and Hackathon Schedule:** Rebecca Veldon proposed incorporating working group updates alongside the hackathon to manage meeting time effectively ([00:08:58](#)). George Fitzgibbons suggested a structured flow, including an onstage introduction to working groups, followed by dedicated enablement time blocks and an open forum for hacking, with a project review during the evening happy hour or awards ceremony ([00:11:03](#)) ([00:13:05](#)). Holly Hall expressed support for this structure and suggested the enablement sessions could take place during the 75 to 80-minute lunch period ([00:14:14](#)).
- Technical Preparation and Requirements:** Devon Hillard emphasized the need to provide technical requirements to participants in advance to prevent setup issues, suggesting a QR code landing page ([00:12:12](#)). The group discussed the importance of defining a clear timeline and communication strategy for attendees ([00:18:29](#)). Rebecca Veldon mentioned that a small trophy could serve as an award to incentivize participation ([00:15:18](#)).
- Hackathon Feasibility and Foundational Support:** Devon Hillard raised concerns about the feasibility of participants building functional solutions within a three-hour timeframe, suggesting the group provide pre-built modules or a foundational toolset to ensure success. Rebecca Veldon confirmed that these resources could be hosted on GitHub, ensuring participants could learn without getting bogged down in basic setup ([00:17:42](#)).
- Hackathon Participation and Inclusivity:** Holly Hall inquired about the minimum viable number of participants, and the group agreed that 15 to 20 attendees would be a successful turnout ([00:19:52](#)). Everett Zufelt advocated for inclusivity, ensuring the hackathon structure accommodates both individuals who prefer to work alone and those who wish to collaborate in teams. Everett Zufelt also noted that a backlog ticket already exists to define these technical prerequisites ([00:20:36](#)).
- Implementation of Demo Days:** George Fitzgibbons proposed initiating "Demo Days" where members could showcase their agents, whether internal or external, during future sessions ([00:21:31](#)). Everett Zufelt suggested allocating 10 to 15 minutes per meeting for these presentations to share learnings ([00:22:20](#)). Doug Wessel volunteered to be the first presenter, and the group agreed to coordinate future sign-ups via the Slack channel ([00:23:08](#)).

- **Documentation and Article Projects:** Everett Zufelt noted that documentation regarding different "buckets" of work is currently available in GitHub and proposed converting these into articles ([00:24:06](#)). The group agreed that members should spend 15 to 20 minutes over the next two weeks reviewing these materials asynchronously to provide critical feedback ([00:24:51](#)).
- **Administrative Housekeeping and Hackathon Ownership:** Rebecca Veldon committed to retroactively adding meeting notes and transcripts to GitHub. Regarding the organization of the hackathon, Devon Hillard expressed concern about project ownership, leading to a consensus that George Fitzgibbons and Tim are the co-chairs responsible for the event, with Rebecca Veldon planning to coordinate with them to establish a product backlog and task list ([00:27:31](#)).

Agent Ecosystem Working Group 1: Enterprise Agent Architecture - MACH Alliance - Transcript

00:00:03

Doug Wessel: Hello.

Rebecca Veldon: Hello. How are you doing?

Doug Wessel: Not bad. How are you?

Rebecca Veldon: I'm good, thank you. Just getting things sorted. Hello

Devon Hillard: Hello. Heat.

Holly Hall: Hey folks. Hey Deon.

Devon Hillard: Hello.

Holly Hall: Um, I just Shelley just copied you into an email about agent ready. I don't know if you saw that. I'd love you to push it along if you can.

Rebecca Veldon: I think that's what I'm currently emailing Devon about. There we go. Sorted.

Holly Hall: Hi, George. Nice to meet

George Fitzgibbons: Yeah,

Holly Hall: you.

George Fitzgibbons: you as well. I know. Uh I think we love to have you kind of start the session and go through it.

Rebecca Veldon: All

George Fitzgibbons: Tim's not going to be here today, so I think maybe just a couple more minutes and then uh we can start rolling a little bit. Uh I'll give the context. I have to leave early too. So we'll get right to

00:02:11

Holly Hall: short one

George Fitzgibbons: it.

Rebecca Veldon: right.

Holly Hall: today.

Rebecca Veldon: So we'll start with Holly just as she's doing and talking about the hackathon stuff and then we can go on to the progress for all the blog post articles and all that jazz so we can free Holly up to go nuts.

George Fitzgibbons: Coke.

Holly Hall: Thank you.

George Fitzgibbons: Let's get to

Holly Hall: Um,

George Fitzgibbons: it.

Holly Hall: so I I guess uh I would love to hear from you

Rebecca Veldon: First

Holly Hall: guys. So, um, we have MACX Amsterdam coming up uh,

George Fitzgibbons: What the

Holly Hall: end of September. I can I can walk you through the agenda a little bit.

George Fitzgibbons: f***?

Holly Hall: Um, but I understand there's a kind of interest from this group to host a

Rebecca Veldon: heat.

Holly Hall: hackathon. Um, so I'd love to make it happen. I just want to be able to understand a little bit more about the kind of nature of what you might run so I can be thinking about, okay, do I have a room for you?

00:03:17

Holly Hall: Do I have, you know, can I feed and water you? All of those important things. Um, and I guess most importantly, can I ensure to get the right people in the room? Um, so yeah, I can maybe just walk you through what we plan and then hand it over to you. Does that make sense, George?

George Fitzgibbons: What

Holly Hall: Perfect. So if you attended MACX in Toronto in April,

George Fitzgibbons: I've

Holly Hall: we are sticking to a very similar agenda. So um we will be kickstarting in our main venue called Felix Meritus in Amsterdam on Monday the 28th of September. Um so we will likely start 2 or 3:00 p.m. uh just for members. So that's a completely open day. We'll um we'll do some onstage stuff, but that's also for working groups. It's it's it's for it's for uh the alliance to share strategy and have the input from members, but also for us to to build on our existing programs. So that runs all afternoon and then we have welcome drinks uh like 6 to 8 and that's for obviously all of the members and anyone else who is joining the next day.

00:04:42

Holly Hall: So anyone who's registered for the conference attends those welcome drinks. So on on that day we're we obviously have the venue from first thing in the morning. We're doing a degree of setup, um, you know, vinyl on the walls, that kind of thing. But we're very lucky in that the venue is a very beautiful one and we're not needing to do too much to it. So there's a there's quite a bit of um room available should you wish on that day probably from around 10 or 11 a.m. The next day we do full conference. So that's for all attendees. We look we'll we'll be around 400 people. um about 250 of those are enduser practitioners and 150 are members. We will run so we'll

be open from 8 we'll run three keynotes um between 9 and 10:30 and then we go into three breakout rooms. So, we're doing less keynotes this year because the feedback was people want to get more hands-on, more practitioner case studies, you know, less less keynotes. So, um that's uh why we're responding to that.

00:06:07

Holly Hall: That literally runs the whole day and pretty much fills all of our rooms until 5 and then we run the Mac Impact Awards dinner and drinks. Um, next day is for spons member sponsors only and end user practitioners and we move venue. So we're at Zoho House Amsterdam for that one. So when I'm looking at um if if we go purely on the kind of practicalities of is there some space uh to run something to have you you know to be able to give you a room etc. Monday looks very good. Um we have a lot of availability but we don't have like the end user practitioners aren't that like they don't kind of kickstart till the welcome drinks right and a lot of people don't get in until um you know Tuesday morning. So if we if we wanted um like more end user practitioners to join, we would have to invite them specifically for that session. And then Tuesday we have the opposite problem in everyone's there um but limited space. We do have a space right at the top of the venue um for it's not a loft.

00:07:36

Holly Hall: It's it's a nice room, but um uh that probably fits 25 something like that nicely. And that's probably available from lunchtime onwards, so half a day. Any questions on any of that?

George Fitzgibbons: none top of mind uh from me and then you said so if I have it oriented it's Monday Tuesday Wednesday and when is Wednesday similar to Monday where audience could be small but there's openings

Holly Hall: Wednesday, we just we're using because we change venue, we don't we don't have venue. So,

George Fitzgibbons: Yeah.

Holly Hall: if we were to do it on Wednesday, we would need to find an additional venue. Yeah.

George Fitzgibbons: Okay. Well, I'd love to open up to the floor, see what people think. And from what you think, too, my initial thought is I would lean Tuesday just because people buzz that kind of thing. Uh, and you I think people may have planned their trip already. I don't know. To your point, if welcome drinks is Monday night, then it's a that's a full full day earlier.

00:08:58

George Fitzgibbons: So, uh, that I think Tuesday makes sense, but I'd love to hear what people

Holly Hall: And and would you like So how many people would

George Fitzgibbons: think.

Holly Hall: you in it and what's the kind of like would you is it like what sort of roles what sort of seniority like that stuff would help me

Rebecca Veldon: If I can possibly just add just because I'm also in the other working group, um they are also wanting a little bit of time to just talk about working groups. So, not a hackathon, but to kind of this is what we're doing. This is what we've done so far. This is where we're going. So, I don't know if that's a slight middle ground where you guys want to meet. It's a shorter time just because we won't be able to have the full name that you are wanting,

George Fitzgibbons: Cool.

Rebecca Veldon: but I wanted to put this out there because we haven't had a chance to discuss it yet.

George Fitzgibbons: That that seems logical that they could just be combined.

00:09:56

George Fitzgibbons: Like they could start by introducing what a working group is and then we could do something as a working group.

Holly Hall: I'd also in all hon I'd really love us to be talking about the the program as a whole on stage at the start, right?

Rebecca Veldon: Get

Holly Hall: I'd like I'd like cuz as soon as we get as soon as we go into the afternoon,

Rebecca Veldon: him.

Holly Hall: everyone's split across like across the whole venue. So, it would be great to be able to address all 400 or you know um the early birds anyway. So, I think we'll certainly make sure that that Jason or whoever it is has, you know, is able to like brief the whole crowd on what we're doing and how they get

George Fitzgibbons: Okay.

Holly Hall: involved.

George Fitzgibbons: May I I may have a suggestion now and I don't mean to dominate this. Uh so people I'm going to stop talking after I throw out my suggestion. Uh so what could make sense? So since you said the the floor would be like 25, let's say 30 people and I'm going to frame it at a time.

00:11:03

George Fitzgibbons: And so what we could potentially do is have maybe two time blocks that are dedicated of enablement for let's call it the hackathon say and this is just how I envision it quickly. You know the first working group could get on stage and say talk address the idea of working groups and then they could plug the hackathon and say there's going to be two enablement time blocks upstairs. go to one of the two sessions and then it's going to be an open room to hack and build agents with that group up there. And at the end there's going to be a review of all the projects. And

maybe if we could we could get a bigger space to do the review of all the projects. say like at the end during happy hour or

Holly Hall: Yeah, you could. I mean,

George Fitzgibbons: something

Holly Hall: if you could do it as part of the awards possibly in the evening, you could even award. Um,

George Fitzgibbons: that that makes it sound very official.

Holly Hall: yeah.

George Fitzgibbons: That sounds good.

00:12:12

Rebecca Veldon: are very official. We've got articles and everything.

George Fitzgibbons: Cool. Well, as I said, I'm gonna stop talking. Devin, anybody, what do you

Devon Hillard: Yeah, the only I'll throw out there is um based on what we talked about last time,

George Fitzgibbons: think?

Devon Hillard: we should probably at some point send out a hey, if you think you might want to be part of a hackathon, here's the technical requirements and stuff you should have prepped so people don't see us talk about it, run upstairs and then we spend the entire time trying to get their environment working. Um, so being able to provide that ahead of time for folks who might be interested will be a big time saver.

Rebecca Veldon: Yeah, I also probably look at getting us some like signs and stuff saying hey this is what you need for it we are doing hackathon with these systems um

Devon Hillard: Yep. A QR code landing page with links and stuff.

Rebecca Veldon: but

Holly Hall: When how long do you think you

Rebecca Veldon: yeah

Holly Hall: need?

00:13:05

George Fitzgibbons: I well to the point of if I were to time block it, it's five five minutes after the working group just to introduce the concept

Rebecca Veldon: Come

George Fitzgibbons: and you know to the point we have all the documentation ahead of time but there's a plug at the end of the five minutes and then there's two let's call them 30 minute enablement sessions

Rebecca Veldon: on.

George Fitzgibbons: where session one, session two, pick a session that works for your time window. And they're right after and it's you come up, we walk through the hackathon, and we say, "All right, start hacking. We're going to be in here. We'll help enable you throughout the day." And we do two of those sessions. And then it is just open forum upstairs where people come in, they have free time or they dedicate it to building things. And then we say from whenever the last enablement session ends till whenever happy hour

Holly Hall: That's perfect.

George Fitzgibbons: starts you can hack. And then to the point of we'll have it all centralized. So then we can kind of review it and to your point then we can kind of call out some projects and give an award.

00:14:14

Holly Hall: I'm wondering if you because we have I think 75 or 80 minutes for lunch. I wonder if you do the enablement sessions then and

Rebecca Veldon: Yes.

Holly Hall: then and then that gives them like I don't know

George Fitzgibbons: Cool.

Holly Hall: what's that like three and a half hours of the afternoon they can dip into sessions if they want to dip into a session or they can come back and

George Fitzgibbons: Cool. All right.

Holly Hall: Continue.

George Fitzgibbons: Yeah.

Rebecca Veldon: We need to find how we're going to do the awards or uh a hackathon

George Fitzgibbons: Thanks,

Rebecca Veldon: award because there'll need to be a deadline for when we finish the projects. and review them. So, it's going to be that manic period of reviewing everything, choosing something,

Holly Hall: Oops.

Rebecca Veldon: getting it prepped.

Everett Zufelt: Is I I just popped in here.

Rebecca Veldon: So,

Everett Zufelt: Is it do we need an award or is it like just acknowledgement if that makes

Holly Hall: I think. Yeah. Yeah. Yeah.

Everett Zufelt: sense?

00:15:18

Rebecca Veldon: this easier.

George Fitzgibbons: We're going to All

Holly Hall: Yeah.

George Fitzgibbons: right.

Rebecca Veldon: I'm going to get us like a little trophy and we'll be great.

Holly Hall: Sorry, Eva. You can count on me to

Everett Zufelt: Almost as bad as Jason.

Holly Hall: we were just thinking so yeah we were talking about running these kind of 30 minute enablement sessions maybe over lunch I think would give everyone an opportunity to come right and we have long lunches so they can go and do this stuff um and then give them the option to be doing it over the afternoon. We have this really cool It's like a big yellow room which is kind of cafe setup which I think might work really well for it actually. Um, and then yeah,

Rebecca Veldon: Yeah.

Holly Hall: I don't know like how formal we need to make it, but we wanted to be able to get up on stage just I guess as part of the awards ceremony and talk about what's been going on during the day. So I think whether you want to say, "Hey, this is the best thing. Here you go." Or like,

00:16:35

Holly Hall: "Look what we built in three hours. Maybe and maybe we need to plant a few people to do something

Rebecca Veldon: I no I

Holly Hall: amazing.

Rebecca Veldon: personally would love to look at what we've built in 3 hours cuz I feel like that will bring people into the working groups

Holly Hall: Yeah. Yeah.

Rebecca Veldon: cuz it shows people this is what can

Holly Hall: Yeah.

Rebecca Veldon: happen. Um by having that variety as well because everyone's got such creative minds for these sorts of things.

Holly Hall: Thank you.

Rebecca Veldon: It's fantastic chance to showcase to end users and

Holly Hall: Any

Rebecca Veldon: members.

Holly Hall: other thoughts from the

Devon Hillard: Phil,

Holly Hall: group?

Devon Hillard: I'll toss out there and and um we might we got to find the it's a kind of a fine tight rope line to walk, right? But giving people enough foundation that they can actually successfully build something interesting and useful in three hours um without making it a copy paste exercise where they haven't learned anything and they haven't done anything that we didn't already hand them, right?

00:17:42

Devon Hillard: But I I don't think that in a three-hour period we can drop people into a room, even if they've pre-installed the baseline tool set and have them have a complete working even small scope agentic solution that they learn a lot, they feel good, and we can demo on stage later or talk about. I think we're going to have to we're going have to build the the foundation uh a little bit for them and you know maybe have some pre-built modules that can easily plug in here, here, and here if they choose to use them. I don't know. I think we're going to have to figure that out. Um you know, I think a lot of the stuff if you're coming from scratch is like, you know,

George Fitzgibbons: Yeah.

Devon Hillard: it's a it's an eight hour day or it's a 16 hour day and for three hours to be successful, we're going to have to have some stuff already in place.

Rebecca Veldon: We can keep stuff like that in our GitHub though, can't we?

Devon Hillard: Yeah,

Rebecca Veldon: Just

George Fitzgibbons: Yeah.

00:18:29

Devon Hillard: absolutely. This is going to be about finding that like it's got to be real enough that it's valuable.

Rebecca Veldon: perfect.

Devon Hillard: Um, but we're going to have to give them spoon feed them a little bit up front so that they can actually accomplish something in the time frame.

Rebecca Veldon: Perfect.

George Fitzgibbons: Yeah,

Holly Hall: makes sense.

George Fitzgibbons: cool. Sounds

Rebecca Veldon: So, looks like we have a target of where we're going

George Fitzgibbons: good.

Holly Hall: Very nice.

Rebecca Veldon: then.

Holly Hall: Okay. Um, we'll have a think about how to incorporate this into the schedule. It would I think it would be good for it to be visible as a track, right? Um, so let's yeah, let's have a think about how we do that.

Rebecca Veldon: Yeah.

Holly Hall: Um, and we'll get we'll get back to you with a proposed kind of timeline. Um, and then we'll need to be communicating it with attendees well before to your point, Devon,

Rebecca Veldon: Okay.

Holly Hall: there needs to be some prep involved. Um but yeah and it I guess it would like what's a minimal minimum viable number here that we would work with like if we get if 15 people show up for this is that does that work?

00:19:52

George Fitzgibbons: Yeah,

Holly Hall: Yeah.

George Fitzgibbons: we'll get people

Holly Hall: Yeah.

Devon Hillard: Yeah.

Holly Hall: Oh no.

Rebecca Veldon: Yeah.

George Fitzgibbons: accepted.

Holly Hall: I don't doubt it. I'm worried about all the other tracks being empty now.

Devon Hillard: I think there there'll be a technical bar for it to be really useful for folks.

Rebecca Veldon: Sure.

Devon Hillard: So I think we'll we'll only select for a slice, but I think yeah, 15 would be great, 10's great, 20 is great.

Holly Hall: Yeah.

Devon Hillard: You know, we also have to think about when we're when we're I think narrowing it down, we'll have to really kind of think about what is our target like are we doing team sizes? Are we saying individual work? Is it a three-person team? And you know, we're going to have to think through a lot of those details. And honestly, probably sooner rather than later because uh uh Amsterdam's coming right up. So

Everett Zufelt: Yeah.

Holly Hall: It's ages away.

Everett Zufelt: Um,

Holly Hall: Don,

Everett Zufelt: I'll I'll Yeah,

00:20:36

Holly Hall: don't worry about

Everett Zufelt: Holly doesn't want to hear anything about it being around the corner.

Holly Hall: it.

George Fitzgibbons: Okay.

Everett Zufelt: Well, two thoughts on what you say. I think those are all the right questions, Deon. I think two thoughts. Um, one, uh, I I think I think we've got a ticket in the backlog for figure out what what the technical prerequisites are. Like, hey everybody, you know, one of these three things should probably be true about your computer before you show up kind of a thing. Not we're not trying to make the bar high, just like, hey, it would be good if you've installed this thing of a jiggies uh, when you show up. My other thought around teams is with my uh neurode divergence hat on uh I think we should probably do our best to be welcoming to people who want to sit in the corner and learn by themselves or people who want to gather together as a group. I wouldn't want to make it feel like one or the other is the right way to approach

00:21:31

Holly Hall: This

Everett Zufelt: this.

Rebecca Veldon: 1007.

Devon Hillard: Yep. No, that sounds great.

Holly Hall: one's

Devon Hillard: We'll just need to scope things so that you can be successful in the time frame if you're one person or if you're three

George Fitzgibbons: Cool.

Devon Hillard: people.

Everett Zufelt: Yes, agreed. Agreed.

Holly Hall: be careful.

George Fitzgibbons: Um, ever I called this on the meeting. I do have to leave early too to go to event. Um,

Everett Zufelt: Oh, yeah.

George Fitzgibbons: but I have one thing.

Everett Zufelt: You're in New York this

George Fitzgibbons: Uh,

Everett Zufelt: week.

George Fitzgibbons: and yes, uh, we got, um, Doug, I'm going to put you on the spot.

Holly Hall: Hello.

George Fitzgibbons: I do want to throw out one last non uh non-hackathon

Holly Hall: Someone said that.

George Fitzgibbons: idea that I think would be interesting for this group to talk about. And Doug, I'm putting you on the spot, man. Doug gave me a demo of an a day and it was awesome. And it made me think like we and what flavor of this we do may may be different.

00:22:20

George Fitzgibbons: uh but some sort of demo days and whether that's internal or an external version

Doug Wessel: Okay.

George Fitzgibbons: but I feel like we should be demoing agents to each other and whether and what kind of format that is I'm going to throw it out to the group but like whether we do like one every session whether we have a dedicated day to

Everett Zufelt: Love it. No,

George Fitzgibbons: do it but some flavor of demo days I'd love for this group to do

Everett Zufelt: I love that.

George Fitzgibbons: and uh sorry Doug but your agent was awesome the other day and now I want

Doug Wessel: appreciate it.

Everett Zufelt: You got thrown under the bus.

George Fitzgibbons: With that, I'll talk to everybody later.

Everett Zufelt: Thanks, George.

Doug Wessel: Thanks,

Rebecca Veldon: Thank

Devon Hillard: Thanks.

Everett Zufelt: No,

Doug Wessel: sir.

Everett Zufelt: I love that idea.

Rebecca Veldon: you.

Everett Zufelt: I think like we carve out 10 15 minutes each one of these sessions and just have somebody

Devon Hillard: Thanks.

Everett Zufelt: sign up and come and demo the thing they're working on and what what you broke and what you fixed and what you learned.

00:23:08

Rebecca Veldon: Yep.

Everett Zufelt: I think that's

Doug Wessel: Okay.

Everett Zufelt: awesome.

Devon Hillard: Nice.

Rebecca Veldon: Yeah, we can start uh implementing that next session then.

Devon Hillard: I love it.

Rebecca Veldon: Doug, do you want to be

Everett Zufelt: And and it sounds like Doug is number one. Yeah,

Rebecca Veldon: after?

Everett Zufelt: Doug's number one on the

Doug Wessel: Sure.

Rebecca Veldon: Um,

Doug Wessel: Sure.

Rebecca Veldon: if anyone else wants to show their agent, put it in the Slack channel and then we can organize in order so that way it's not, oh god, who's the next person? We don't just point fingers at that point.

Doug Wessel: It's

Rebecca Veldon: So, yeah.

Devon Hillard: Sounds

Rebecca Veldon: Fantastic.

Devon Hillard: good.

Rebecca Veldon: Right. Um, so that's hackathon. That's the next agent showcase. Did we want to talk articles?

Everett Zufelt: Uh well I think we got the one published.

Doug Wessel: up here.

Everett Zufelt: Are we working on other articles?

Rebecca Veldon: Yep.

Everett Zufelt: I don't know that we're I know we've written a lot of documentation and

00:24:06

Rebecca Veldon: Yes.

Everett Zufelt: put it in GitHub. I don't know that I don't I'm I'd love it to them to become articles. I don't know that that was the initial intent of it all, but I' I'd love it for it to be articles at some

Rebecca Veldon: No, I'm getting my working groups mixed up because they're doing articles. We're doing documentation. Um, but we could also make articles out of them because we have some really nice shiny um documentation that has been written up.

Devon Hillard: Yeah,

Everett Zufelt: I

Devon Hillard: I have to check my notes. I thought we were we were doing something beyond what we'd done last time around for the the the buckets.

Everett Zufelt: I

Devon Hillard: We'd had like an initial thing that was mostly done, then we were doing something that I thought was articles, but I have to check my notes. I've made zero progress on mine since the last meeting, so I didn't want to bring it up, but I I think still on the road map

Everett Zufelt: Yeah. Yeah.

00:24:51

Everett Zufelt: So, I think I think that most of the groups uh I think at least four maybe all

Devon Hillard: there.

Everett Zufelt: have have some foundational like hey here's like more of a definition of here's what bucket one two three four and five look like and mean and use cases and that sort of

Rebecca Veldon: Wow.

Everett Zufelt: stuff. So maybe the ask for our next goound could be if we could all and I'll drop the link uh to where they all live into the chat uh into the Slack channel, but maybe we could all spend,

Rebecca Veldon: Yeah.

Everett Zufelt: you know, 15 20 minutes over the next two weeks and just scan them over and be able to come and provide feedback and then start to talk about ideas for, you know, how can those turn into articles. But foundationally, I think they're going to

turn into how we start to build out the the exercises and activities in the hackathon as well.

Rebecca Veldon: It all ties in quite nicely.

Devon Hillard: Yep.

Rebecca Veldon: Let me just see if I can get those buckets that we had.

00:26:08

Holly Hall: I'm going to jump off, folks. Lovely to see you all.

Devon Hillard: Good to see you.

Rebecca Veldon: So, uh, basically each bucket was to support the hackathon. So, it all ties into that. Um,

Everett Zufelt: Yeah. So, I've just gone ahead and dropped it in the Slack channel, right? So in this GitHub folder, there's an article about each of the buckets and and so maybe we could just like, you know, maybe even just use the remainder of the time we have in this meeting like asynchronously just spend like the 15 20 minutes skim each one and and be able to share feedback with each other.

Devon Hillard: Sounds good.

Rebecca Veldon: Yep.

Everett Zufelt: Yeah. And then that gives people who feel like they have a little bit more homework to do some time to do the homework and the folks who've put out some ideas can get some feedback. And I think it's a good way to to just keep cross-pollinating these ideas.

Devon Hillard: Agreed. That sounds

Everett Zufelt: Perfect.

Devon Hillard: great.

00:27:31

Everett Zufelt: Anything else you want us to cover, Rebecca?

Rebecca Veldon: No, we've covered quite a bit with the hackathon and everything. Um, I will admit that I have been a little bit lax in posting the notes into GitHub. So, I that is on my to-do list before our next session is to retroactively add all of the notes, all those transcripts and everything into there. So, uh, people can review stuff at their leisure. That's it from

Devon Hillard: I might be overthinking it,

Rebecca Veldon: me.

Devon Hillard: but I feel like there's probably, at least in my head, there's a lot be done to prep for the hackathon. Um, and so I do kind of worry about who owns that and then making sure that

Rebecca Veldon: Yes.

Devon Hillard: we've got enough of a timeline in place that September doesn't roll around and we're all panicking.

Everett Zufelt: Yeah,

Devon Hillard: Um,

Rebecca Veldon: Yeah.

Everett Zufelt: I think fundamentally George and Tim own it and like like we all are helping

Devon Hillard: so

Everett Zufelt: them but they own it um because they're the co-chairs of the working group and then maybe Rebecca we could get time with George and Tim like I think what needs to happen is somebody has to sit down and will effectively be the product manager of the hackathon and define the backlog and say hey here hey guys here's 20 things we need to do between now and the hackathon and then this group of people can start pulling items off of that list of tasks and work on

Rebecca Veldon: Yeah, I think that might end up coming over to my side just with going to all of the MacX

Everett Zufelt: Yeah.

Rebecca Veldon: meetings.

Everett Zufelt: So, I think probably getting for you to get time with George and Tim and build that backlog, I think it's an important next

Rebecca Veldon: Yep. All right. I'm just adding it on my to-do list.

Everett Zufelt: All right. So then I think for the rest of the time maybe everybody just like add some comments, good feedback. Like I mean I think be crit like we want these art these this content to be good. So I think critical is good, right? Go through the stuff and ask questions and leave comments and be be critical so that when we get it out there into the world, it's the best it can be.

Rebecca Veldon: Perfect.

Devon Hillard: Sounds good. All right.

Everett Zufelt: All right, cool. Thanks everyone.

Devon Hillard: Thanks everybody. Have a good one.

Doug Wessel: Thank
